Corporate Capabilities Statement

Service-Disabled Veteran-Owned Small Business (SDVOSB) | Established 2009 | Leveraging Best Practices & Experience

Fulcrum Vets, LLC provides healthcare data analytics, information technology, and secure-facility program services to Federal, Department of Defense, and Intelligence Community customers. Our largest contracts support the Department of Veterans Affairs (VA) on its Data Quality and VIReC healthcare analytics programs. Our newest service line manages the front end of a Sensitive Compartmented Information Facility (SCIF) program, from needs statement through accreditation and operations, as an independent advisor with no construction margin to protect.

SCIF Program Solutions

- **Front-end program management:** needs statement, requirements, site and facility readiness, and an Integrated Master Schedule tailored to the project.
- **Estimating:** hours, phases and ceilings produced by FVSEEM™, our proprietary SCIF Evaluation and Estimation Model.
- **Build-out oversight:** coordination between the Prime Customer, builder and End-Customer security authority.
- **Accreditation and ATO:** documentation, evidence packages and system authorization support.
- **Operations and maintenance:** continuous monitoring, re-accreditation and relocation support, government property management.
- **Reporting:** weekly and monthly status, risks, approvals and customer-safe reports from one system of record.

Why Fulcrum Vets. One lifecycle under one roof, backed by records. Hours, phases, risks, approvals and next actions live in the FVSEEM™ Workbench with a full audit trail, so every number we report traces to a record. As an SDVOSB we team readily with large builders and integrators that need small-business participation.

Core Capabilities

- Healthcare data analytics for VA programs
- Healthcare IT and data quality
- Systems engineering, integration and development
- Program Management Office support and executive consulting
- Capture management, proposal writing and graphical CONOPS for prime contractors
- Data center operations, infrastructure and managed services
- Business process re-engineering and IT assessment

Past Performance

- **Department of Veterans Affairs:** healthcare data analytics for the VA Data Quality and VIReC programs, our largest current contracts.
- **SCIF line of business:** service catalog, methodology and basis-of-estimate development supporting a Prime Customer on work for an End-Customer in the Intelligence Community.
- **Earlier work, Health and Human Services:** IT consulting at HHS, the Centers for Medicare & Medicaid Services and the Centers for Disease Control. Project management, systems and storage administration, network management, Remedy development and asset management.
- **Prime contractor support:** capture and proposal work for Tier I companies pursuing Federal contracts.

Differentiators

- **Independent front-end advisor:** we advise on options without a construction margin to protect.
- **Measured, not claimed:** outcomes tracked in the FVSEEM Workbench rather than absolute promises.
- **Seventeen years of IT experience** as the foundation for secure-facility information systems and accreditation.
- **Healthcare data depth:** VA analytics experience and HHS business knowledge, paired with proven systems integration practice.
